

TEEPEE TENT

Connections Manual

PRO TEEPEE TENTS

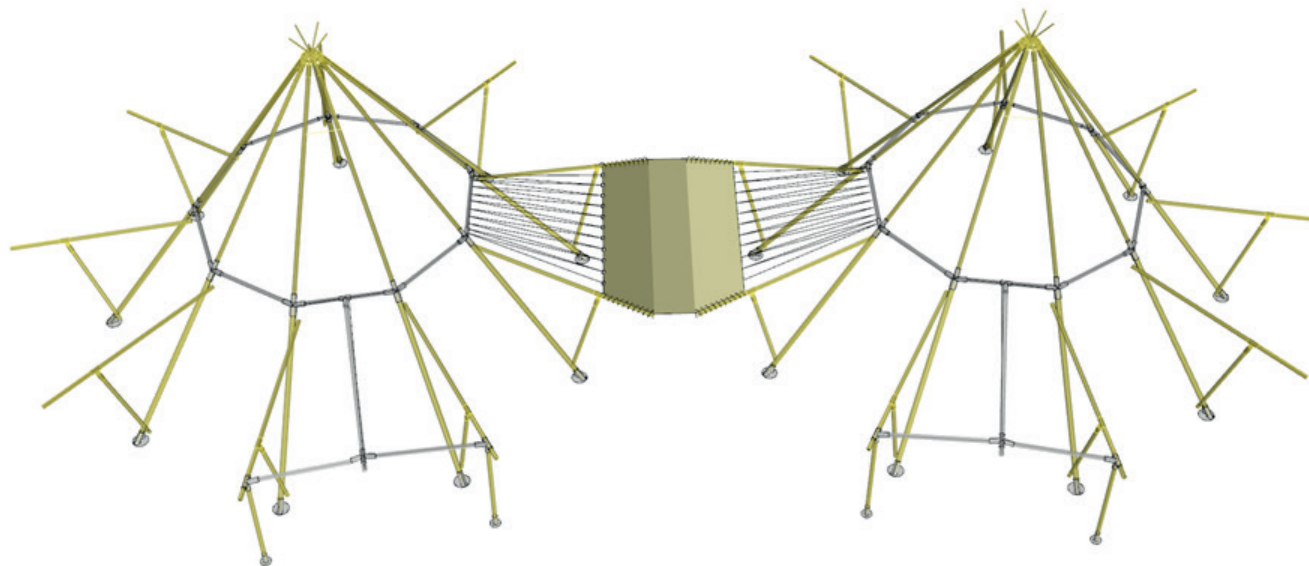

PRO TEEPEE TENTS

Packing list

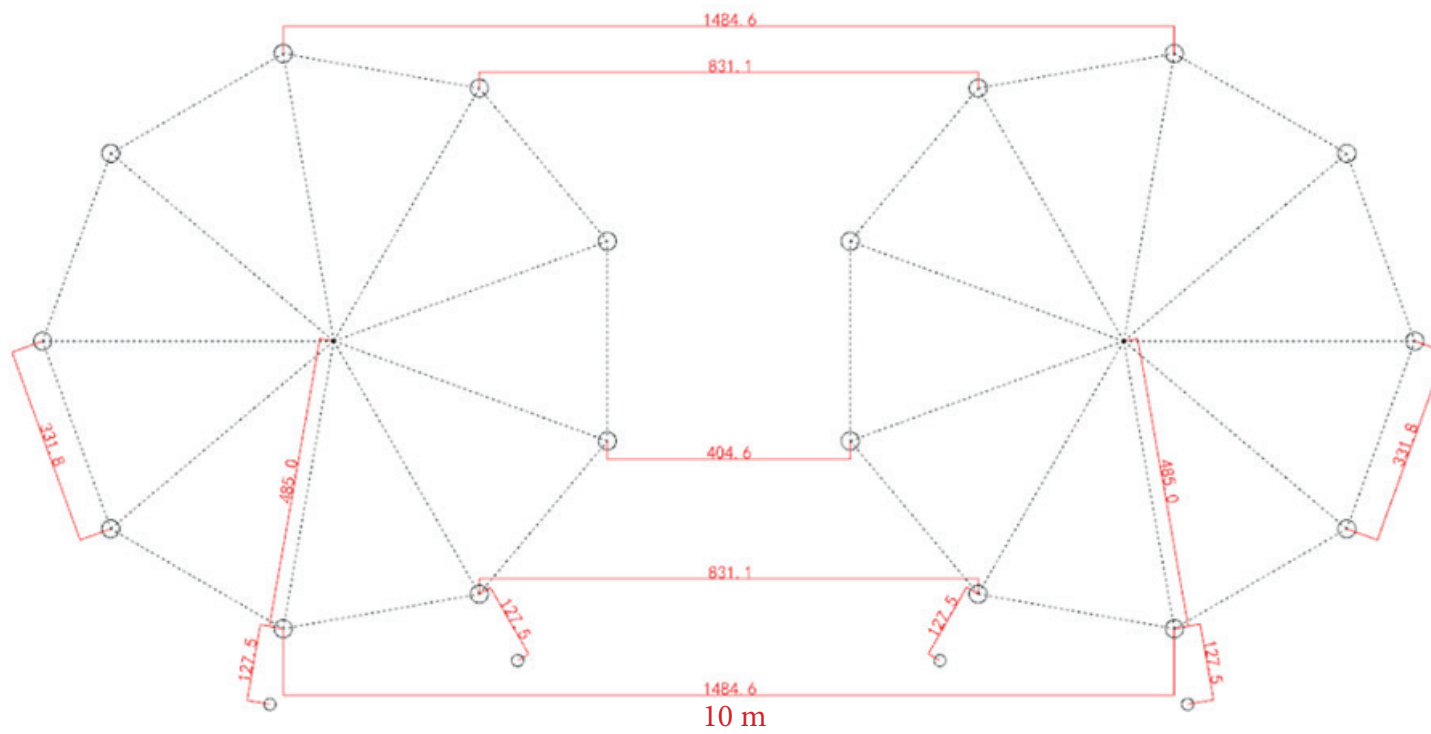

8# khaki rope		1 pc	Length 100m
Connection cloth		1 pc	With connection holes

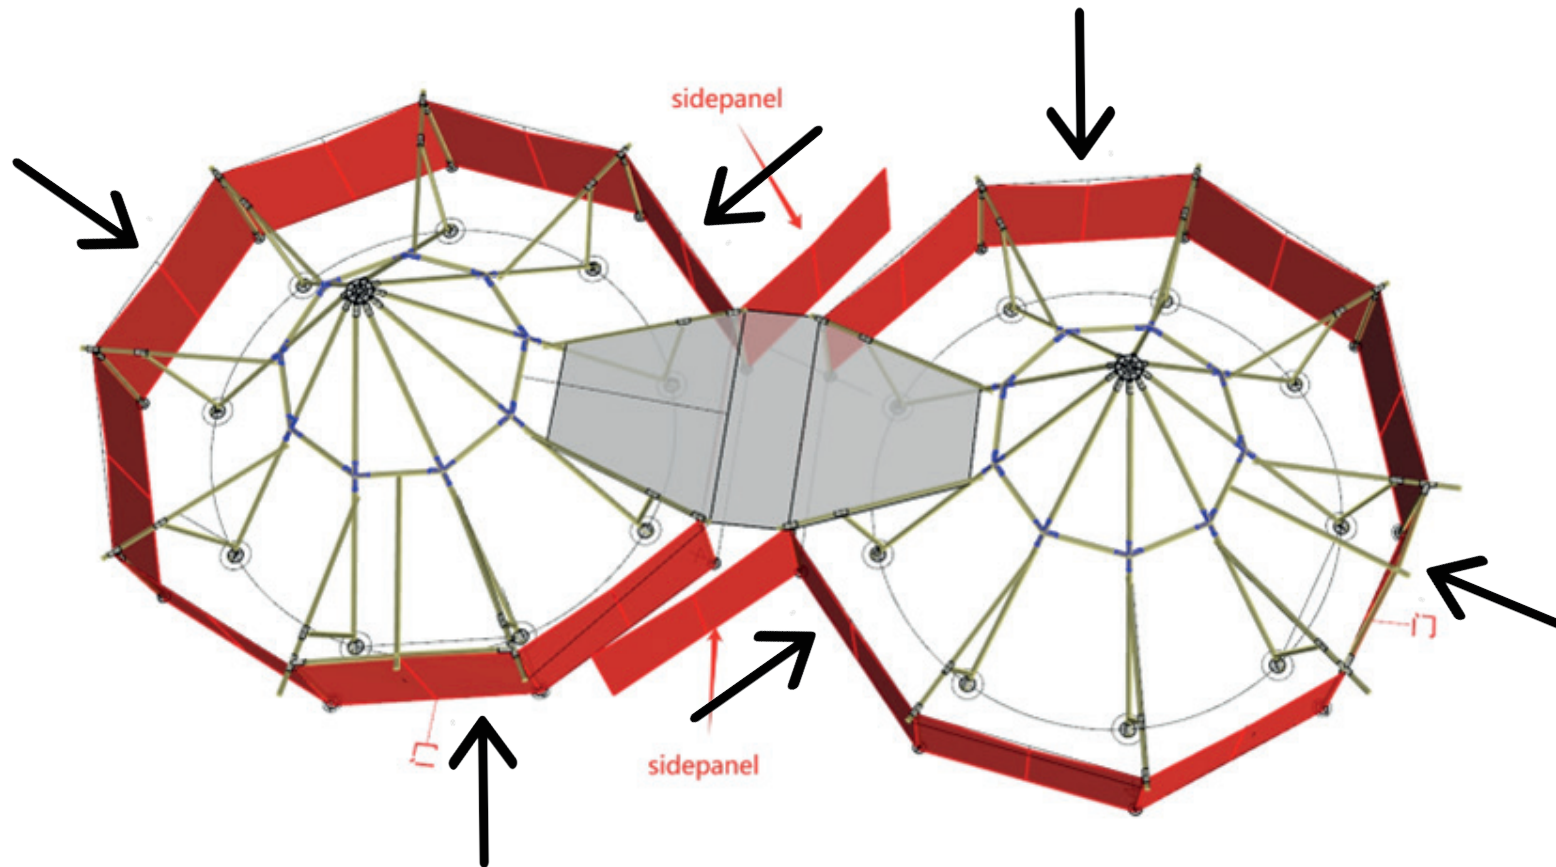

**Installation:**

First install the two tent frames and fix them in the designated position. Then take out the connection cloth and use the 8# rope to pass through the hole on the connection cloth. Then wrap it around the 2# pole of the frame and wrap it in a W shape, as shown below:

Schematic diagram of the connection points between two tents as follow:

Note:

When using a connector piece, please be aware of where the entrance section can be installed (mounting options are indicated by black arrows in the illustration above).

This is because all side panels cover 3 sections, and the side with the entrance is specially designed (made to extend to the ridge for lateral drainage). See markings on the tents.
